Job Description

FULL STACK WEB APPLICATION DEVELOPER

POSITION: Full Stack Web Developer

AREA: Chelan and Douglas Counties

OFFICE: Wenatchee, Washington

WAGE RANGE: \$66,400 - \$86,400 Annually DOQ

CLASSIFICATION: Exempt Employment

WORKING HOURS: Full-time

IMMEDIATE SUPERVISOR: System Analyst

POSITION SUMMARY

The Full Stack Web Developer utilizes LAMP stack technologies with HTML5, JavaScript, CSS, and JS frameworks to convert a current Adobe Flex/Flash application. The Developer is responsible to rebuild all front end and maintain the PHP backend of the current Customer Management System (CMS) database application in collaboration with a team of 2-3 part-time IT professionals.

ESSENTIAL DUTIES

- Collaborate with a team of users, analysts and developers to design new, fast and efficient frontend replacements for the current CMS Flash user interface screens.
- Rapidly prototype new ideas, concepts, and designs
- Deploy best practices utilizing agile development methodologies
- Research and develop new web and mobile technology applications to improve user interface
- Write, modify, and debug web frontend using HTML5, JavaScript, and CSS
- Design, code, and manage automated test scripts, continuous builds, and deployment
- Write new and maintain existing PHP backend and support Linux Amazon servers
- Create modern and responsive layouts from designs and messaging provided by the creative team
- Develop new features, enhance existing features, and implement bug fixes in existing code
- Self-document development processes, conduct peer reviews, and give actionable feedback
- Research user requirements and analyze feedback to determine to improve design quality.

- Develop system interaction or sequence diagrams.
- Identify, correct or solve problems uncovered by testing or customer feedback with creative team.
- Increase understanding of current Web technologies and programming practices through continuing education, reading, participation in professional conferences and workshops.
- Perform Web application updates.
- Select programming languages, design tools, or applications.
- Write and edit technical documentation such as user manuals, testing protocols, and reports.

MINIMUM QUALIFICATIONS:

1. Bachelor degree in Computer Science or 9-month web coding bootcamp in Full-Stack development.
2. One year experience in Web development using HTML5, CSS3, JavaScript and PHP.
3. One year experience using JS frameworks such as ReactJS, NodeJS or AngularJS.

PREFERRED QUALIFICATIONS

1. Three years Full stack development experience
2. LAMP stack and Amazon server experience
3. Two years ReactJS experience
4. MySQL database experience

OTHER QUALIFICATIONS

1. Exceptional communication, organization, and leadership skills.
2. Knowledge of client-side single-page applications using modern frameworks.
3. Excellent debugging and optimization skills.
4. Unit/integration testing experience.
5. Experience with GitHub for version control.
